Autism Virtual Reality Project

Members

Gavin Smith: smithg2016@my.fit.edu

Alanah Cottingham acottingham2016@my.fit.edu

Jiaqi Yang jyang2016@my.fit.edu

Faculty Sponsor

Dr. Lucas Stephane lstephane@fit.edu

Client name and Affiliation

Name: Dr. Dana Gadaire dgadaire@fit.edu

Affiliation: The Scott Center for Autism Treatment

Goal:

The goal of the project is to create a system to assist the therapist, our client to provide an easier funnier and more efficient way in aiding autistic kids in facial recognition.

Motivation:

Our motivation is to assist with the progression of autistic treatment by using a gaming platform.

Features:

Patients

- Keeping Patients Engaged - Based on the treatment needed by the autistic patient the levels will include a friendly character to help guide the patients through tasks and familiar and comforting environments.
- Positive Reinforcement - A consistent character will appear to provide encouragement for the patients. For example, if a patient is struggling with a situation the character can say "You can do it keep trying." This way the patient does not become discouraged.
- Treatment Plan Access - The patient will be able to access the treatment plan their staff member assigned to them in a gamified form.

Therapist

Filtering would important for Staff so it is equally important that they have options

- Individual Profile
- Comparing Profile Filtering: How is Gavin doing compared to Allanah
- Progress Filtering
- Feedback from the patient: How much they are enjoying the process
- Lowest Mean test scores for different categorizes: Why is everyone scoring low in facial recognition dealing with sadness is it too hard

- Highest mean test scores: Is this measurement method too easy

Technical Challenges: Discuss three main CSE-related challenges:

- The learning curve associated with building on a gaming platform. We all currently have experience in unity but this experience is limited
- We have no experience as it relates to database management and have to learn as we develop using an agile development design
- This is the first user-driven system that any of the developers are facing and to fully have a system that changes with user means that we have to visit other platforms that do this and try and develop our own method of constructing the system.

Milestones

Milestone 1 (Sep 30): itemized tasks:

- Have a sitdown meeting with both our faculty sponsor and the Scott center to create full requirements documents outlining exactly how each aspect of the platform is supposed to work.
- Have a development platform be chosen and have a small simple animation environment be setup in unity where the user can look around
- Have an Entity relationship diagram created to have a physical layout for the database
- Select all tools needed for animation and ensure that it is compatible with the game's development platform

- Create a test plan for testing all aspects of each level as it associates with user interactions.
- Create a design document with faculty sponsor.

Milestone 2 (Oct 28): itemized tasks:

- Create and test the pushing and pulling to a database and implementing the form generating feature.
- Create and implement individualized accounts that adjust the experience for each user. Example of this being name display, level of Avatar facial expression exaggeration
- Create and test avatars in-game development environment
- Outline requirements for the Avatars and possibly have a focus group with the Scott centers patients

Milestone 3 (Nov 25): itemized tasks:

- Create a Functional level and be able to test the data collection aspect and Reward system.
- Host a test run with the Scott Center and revisit the requirements document, making changes where necessary
- Create and test filter options for data on each patient's information, as requested by the therapist.
- Create a simple individual platform for the Therapist that is linked to the patient's database.

__Task Matrix__

Task	Gavin	Alanah	Jiaqi
Requirements Document with Scott Center for each aspect	Focus and write the Therapist and Main Database aspect of the document	Focus and write the Rewards System Avatars aspect of the document	Focus and write the Child user aspect of the document
Choose Development platform	Unity research	3d vista research	Copper cube research
Developing a test demo	Working with the creation of the camera for the user looking around the area	Creating and Importing test environment plugin	Importing and testing sprite/avatar plugin
Database ER diagram	Design	Review and Adjust	Review and Adjust
Create a Design Document	Write 40 percent of the design document	Write 20 percent of the design document and review for any adjustment	Write 40 percent of the design document
Deciding on Animation Tools	Look into photoshop and other adobe	Talk to Martin Gallagher an expert in the field	Research any other animation tool not

	products offered by adobe	on other alternatives	mentioned
Creating a Test Plan	Responsible for 20 percent write up and review and adjustment	Responsible for Writing 40 percent of the test plan	Responsible for Writing 40 percent of the test plan

Approval from Faculty Sponsor

"I have discussed with the team and approve this project plan. I will evaluate the progress and assign a grade for each of the three milestones."
